

Offshore energy in a changing world

The energy transition and sustainable solutions are the hot topics running throughout the Offshore Energy Exhibition & Conference. PES finds out what visitors can expect from Europe's leading event that takes place on Tuesday 29th and Wednesday 30th of November 2022 in RAI Amsterdam. Two days full of networking opportunities, sharing knowledge and shaping the future of energy together.

The Offshore Energy platform offers insights and foresights. This provides an overview about what is going on in our industries and this leads to business opportunities. We do this by creating moments where people can meet and exchange ideas and business information. Where companies can showcase their unique solutions to the market. This place is the Offshore Energy Exhibition & Conference in RAI Amsterdam.

Offshore Energy Exhibition & Conference 2022

Everything starts with connecting people. To pick up the pace in energy transition, businesses, workers, governments, experts, investors and the young generation must find grounds for collaboration. Offshore Energy Exhibition & Conference 2022 (OEEC), taking place on the 29th & 30th of November 2022 in RAI Amsterdam is the place where the entire offshore energy industry comes together. This event is an opportunity to get in touch with business leaders, highly qualified experts and professionals across global markets.

The future of offshore energy

The world is facing a global energy crisis and increased prices for energy. Governments and companies are investing more and more in renewables, energy efficiency and clean technologies. The urge to switch to renewable energy is greater than ever, and concrete actions must be made now in order to accelerate the energy transition.

Content program

Energy is grabbing the headlines daily. When it comes to fighting climate change or from the viewpoint of foreign dependency, energy plays a pivotal role. The offshore energy sector is in the middle of all these developments. The content program of OEEC 2022 gives an overview on what is going on and singles out important drivers of change. This year hydrogen, floating wind and CCS will be in the spotlight. Offshore renewables like wind, wave and solar take the stage, together with the maritime industry and fossil energy.

Different markets meet under one roof to foster business opportunities and learn from each other. With panel discussions, presentations and after talks, experts and industry leaders focus on the changing offshore energy landscape. Innovations like hydrogen and floating wind are highlighted, as well as the latest developments in offshore wind, marine energy and oil and gas. The content program, entitled 'The Future of Offshore Energy' includes flowing elements.

Conference sessions

In an inspiring setting, thought leaders and industry experts come together to share knowledge and discuss the latest trends. In the program experts talk about, among other topics, the role of hydrogen in transforming

In many ways we have entered a new era in the last couple of years. The industry is changing. The world is changing. Change is the only constant. The need to innovate and transform are key in remaining relevant and future-proof. To make right decisions in these challenging times, it is essential to have a broad view. Information from our own sector and neighbouring markets can help spot business opportunities. Sharing knowledge with the community creates strong and valuable networks and sparks innovation. It all starts with connecting people.

The driving force behind the changes in the offshore energy industry is the state of the earth. CO₂ emissions are warming up the planet and pollution is damaging ecosystems. To ensure a sustainable future, the energy transition is set in motion. Being future-proof within the oil, gas, maritime, offshore wind, hydrogen and marine energy industries means being part of the energy transition

and investing in sustainable solutions. This is the way forward for our industry.

This is why the energy transition and sustainable solutions are the main topics the Offshore Energy platform focuses on. The communities, the offshore, maritime and energy industries, are front-runners in this change. A large part of the energy transition will take place at sea and sustainable innovations will reshape the maritime sector. Cross-market collaboration connects the gears that set the energy transition in motion.

Think about it. Maritime ingenuity is needed to construct wind farms. Electric power is transmitted by subsea cabling. Oil and gas and the fuels that makes the energy transition happen. Other forms of renewable energy, like marine energy, are needed to meet energy demands. Without dredging, ports cannot function. Everything is connected.

our economies; innovations in the floating offshore wind industry; developments in the marine energy sector; leading a company in these turbulent times and how to be future proof in a world that is changing fast.

The stage

Besides the conference sessions, participants are welcome to visit the Stage, where they can expect perspectives on the human capital, interviews from start-ups, market updates and interviews from stakeholders in the hydrogen sector. In addition, our OEEC reporter will show the stunning exhibition floor and talk to exhibitors, visitors, presenting their products and innovations. The footage will be instantly available for exhibitors to share.

Masterclasses

Elaborating on previous editions, the Government of the Netherlands will host two exclusive masterclass sessions on offshore wind and hydrogen. The program brings together international government officials and business partners, aiming to build new partnerships, enhance international relations and to share knowledge and the latest policy developments.

Matchmaking

OEEC 2022 offers a matchmaking program that is available to all visitors, exhibitors and participants of the event. This feature

makes it possible to get to know each other and to share knowledge about various topics related to offshore energy during the event.

The goal is to provide an event that will allow exhibitors, visitors, speakers and sponsors to connect.

Offshore Energy Exhibition & Conference is where the energy transition takes place. It is

Europe's leading event for the entire offshore energy industry and an opportunity to reach business leaders, highly qualified experts and professionals across global markets. The event takes place on Tuesday 29th and Wednesday 30th of November 2022 in RAI Amsterdam.
