

## Cargostore Support the European Energy Sector During the COVID-19 Pandemic

With the COVID-19 pandemic placing much of the working world on hold, the companies still in operation have had to adapt both how they work and in some cases what they do.

Cargostore Worldwide have continued to support the Dutch offshore energy sector by supplying Refrigerated containers to store vital foods and medicines for extended periods onshore. Due to the pandemic, offshore cargo runs are running less frequently, increasing the demand for refrigerated units and subsequently making these containers harder to locate.

Cargostore have a range of ISO and DNV 2.7-1 certified stock available from Depots in Rotterdam including Refrigerated Containers, Dry Storage, Open Tops, Half Heights and more all in a range of sizes.

Furthermore they supplied two 40ft ISO containers to Den Helder airport as a 'quarantine shelter' which acted as a sanitized area for workers returning onshore to change safely, whilst being cheaper and faster to set up than constructing a building.

With container workshops still operational, bespoke modifications to ISO and DNV containers are also available for lease or hire, which can have additional shelving for equipment, lighting or even extra doors and windows.

**About Cargostore Worldwide:**

Cargostore is one of the world's fastest growing suppliers of ISO shipping containers and DNV 2.7-1 certified CCU's for on and offshore projects. With offices in London and Abu Dhabi and depots across the globe, Cargostore prides itself on providing a seamless and fast service with the flexibility to meet any client requirement.

Cargostore's Intermodal Division supplies ISO certified storage and shipping containers for lease or sale and can offer bespoke container conversions and specialised equipment. The company supplies projects in stability, mining, aid, community development, large scale sporting events and general logistics.

The Offshore Division provides a complete range of Cargo Carrying Units (CCU's) to service the oil, gas and offshore renewables industries, project movers and offshore supply companies. All equipment is designed, built and certified to DNV 2.7- 1 standard. The company has invested in a wide range of offshore CCUs and these are available via their location network in the US Gulf, the North Sea, the Arabian Gulf, Middle East, and East and West Africa.
