

Cargostore Announce Expansion into Taiwan in Conjunction with Rhenus Offshore and Maxlines.

Continuing their growth into developing markets to better serve their clients, UK based offshore container provider, Cargostore Worldwide have announced their expansion into Taiwan in partnership with Rhenus Offshore Logistics and local agent Maxlines New Energy & Project Logistics Inc., in support of the Taiwanese offshore wind industry.

With a projected 5.7GW of installed offshore wind capacity planned by 2025, the industry in Taiwan is growing rapidly, and to support this Cargostore has opened a DNV Offshore CCU depot in the port of Taichung which is now fully operational.

The depot will stock a range of DNV 2.7-1 certified units including Open Top and Half Height offshore CCU's available now with more units being deployed within the coming weeks.

To celebrate the opening of the depot, Cargostore, Rhenus Offshore and Maxlines are hosting an open day at the depot on June 1st. The open day will highlight how they can support the regional offshore wind market, with Cargostore's DNV 2.7-1 certified containers on display.

The port of Taichung, situated on the west coast of Taiwan, is strategically placed to service the construction, operation, and maintenance of the planned wind farms, with the majority located off the west coast. Situating the depot at this location will reduce the delivery time and environmental impact when transporting equipment from the port to the offshore platforms.

With the announcement in November 2019 of a further 10GW planned for 2026-2036, it is clear Taiwan is determined on the path of a clean energy future.

Says Jacob Poot, Vice President Offshore, Cargostore Worldwide, “This is an exciting time for Cargostore Worldwide. Having successfully supported the Offshore Wind Industry in Northern Europe, we see similar opportunities in Taiwan due to the projected growth in Offshore Wind capacity, and we are keen to support projects with our DNV 2.7-1 containers.”
