Sennen Gains Significant Momentum

<u>Sennen</u>, the renewable energy technology challenger brand reveals the launch of its new website. Its new website has been delivered in line with Sennen's accelerated growth strategy as the company enters a new phase of securing more partners and clients, expanding its team, and developing more product features.

Sennen provides powerful, intuitive, and effective data systems that facilitate the deployment and operation of new infrastructure in the clean energy sector. Gaby Amiel, Sennen CEO and co-founder stated:

"Sennen's technology is tailored to two industries; offshore wind and infrastructure investors, enabling clients to drive operational efficiency, improve asset management, and maximise revenue. Delivering such intricate solutions across the entire renewable energy asset lifecycle is a complex message to communicate. Our new website helps to articulate what we do; how we do it; and the value that we can bring to our partners and customers."

The Sennen website will also feature company milestones, partner news and product launches. This will include the announcement of a new integration with StormGeo to display more accurate weather incidents (e.g the chance of lightning and fog), and a Distribute Temperature Sensing (DTS) module that will allow clients to predict and prevent cable faults. Both features of which are in the company's product pipeline for 2020.

The new website is part of the continued growth the brand is experiencing following a successful and oversubscribed seed funding round last October, where Sennen raised more than double its target. The company has since doubled its team and secured several industry-leading clients, most recently including Foresight Group. They join Sennen's impressive client list that boasts market leaders including London Array, Capital Dynamics and Blackfinch, with several new additions to be announced via its website shortly.

Visitors are encouraged to explore the website using Sennen's URL <u>www.sennen.tech</u>.

About Sennen

Sennen provides software for renewable energy market leaders putting data at the heart of their asset management strategy.

The global energy sector is grappling with a rapid and profound transition driven by the trends of decentralisation and decarbonisation. Digitisation and smart data systems are critical to enabling the necessary flexibility and efficiency. Sennen provides affordable, effective and seamless data systems that facilitate deployment and operation of new infrastructure in the clean energy sector. Sennen's technology is deployed by leading clean infrastructure companies including London Array, one of the largest offshore wind farms in the world. Sennen's deep sector experience and high-performance software framework allow them to rapidly configure systems tailored to offshore wind and infrastructure clients' needs.

Infrastructure:

Sennen helps large infrastructure investors to run more efficiently and identify actions to maximise revenue and value. Our asset management system gives central access to trusted data, reduces manual work and gives insights that count.

Offshore wind:

Sennen provides an asset management platform for customers who want to make major improvements to the efficiency and safety of their offshore wind projects. Potential issues are highlighted early and contractor time is not wasted.
