

Imeon Energy has been selected among the 1000 solutions of the international Solar Impulse label as an "Efficient solution", with the aim of highlighting sustainable and environmentally friendly solutions.

Imeon Energy, the French leader in hybrid solar inverters, takes very seriously the main challenges of the 21st century: global warming and the limitation of natural resources. The main problem of renewable energies being the impossibility of producing in a constant way, Imeon Energy's solutions integrate artificial intelligence which optimizes the management of energy flows and storage with hybrid technology.

The awarding of this label is a recognition of the work done by Imeon Energy's R&D and development teams for the IMEON solar inverter technology and the integrated operating system "OS.ONE" as a direct contribution to environmental protection.
