

**Hamburg, March 30, 2021.** The Nordex Group scores in Spain with an order for 182.4 MW. The company will deliver 38 N155/4.8 turbines from the Delta4000 series for a wind farm to be built in the central of the country. The order also includes a service contract for the turbines covering a period of two years.

Delivery and installation of the turbines are scheduled to commence as of spring 2022 with commissioning following in the same year. The Nordex Group will install the Delta4000 turbines with a hub height of 120 metres on concrete towers, which the company will produce locally in Spain.

Together with this project the Nordex Group is currently installing wind farms totalling more than 720 MW in Spain.

In its Plan Nacional Integrado de Energía y Clima (National Integrated Energy and Climate Plan) (PNIEC) Spain has set itself ambitious targets for the development of renewable energy for 2021-2030. The plan envisages installing a total of 22 GW in wind energy over the coming 10 years in order to meet the target of 50,333 MW. This should mean that 74 per cent of electrical power will be generated using renewable energy in 2030.
