

[Sterblue](#) recently won a contract to provide **detailed wind turbine inspection reports to a large wind energy operator in Japan**. To support us, we've partnered with the number one drone service provider in the country, **FLIGHTS**, who carried out the inspections on the field using off-the-shelf drones and Sterblue Mobile app for 3D navigation purposes.

However, due to the ongoing travel restrictions imposed by COVID-19, **the drone pilots had to be remotely trained to Sterblue's solutions**. This was only possible thanks to our **newly launched online training academy for infrastructure inspections**, which has taken our customers' operations to a whole new level.

In this article, we will take you through Sterblue's first fully remote project, which culminated with an impressive achievement: **inspecting a 101m diameter turbine in only 19 minutes!**
