

This is a crucial time for the wind and aviation sector as it strives to accelerate its goal of decarbonisation. The transition to renewable energy can be challenging, but success is massively rewarding for individuals, for companies, for the environment and for national or global net zero targets.

In order to encourage change and support businesses as they explore opportunities afforded by cleaner energy sources, the sharing of information and resources is crucial. This requires communication and collaboration between everyone from stakeholders to technology developers, equipment manufacturers, associations, planners, operators and Government. In turn, individuals and companies need access to platforms that connect them to the wider industry and facilitate interaction with peers, fellow experts and those with experience in different areas of the field.

This is something that RenewableUK is passionate about as part of its commitment to support the entire renewable energy market. Given the social restrictions faced this year so far, the organisation has collaborated with key players across the industry to put together an array of virtual events exploring hot topics in the sector right now. These webinars provide a chance for individuals and businesses to gain useful insight into fields and projects related to them, as well as share their own expertise for the benefit of others.
