

Where the solar industry gathers and innovations are discovered

The combined trade fair Solar Solutions International / Green Heating Solutions is well known in the world of sustainable professionals. Installers, consultants, developers, end users and other business visitors have been finding their way to the exhibition floor since 2013. This year, the trade fair is celebrating its tenth anniversary, with over 275 exhibitors and more than 13,000 visitors.

The trade fair has a wide variety of new, innovative products. Curious about the latest ultra-light solar panels? Looking to find out more about smart mounting systems ensuring that no roof has to be left behind? Or are you interested in the best solutions for the heat transition, such as silent heat pumps and efficient heat networks? From Tuesday 14th to Thursday 16th March 2023 you will discover all this and more, in Expo Greater Amsterdam in the Netherlands.

The latest products on the market

Innovations are given a podium on the exhibition floor. Right at the entrance is Innovation Boulevard, where the latest products are on display. These days it's almost impossible to say 'solar energy production' without saying 'energy storage'. Visitors who are curious about the storage solutions available can feast their eyes on the Smart Storage Innovation Boulevard. The products displayed in these areas are all in the running for the highly sought after Best Innovation Award, which will be announced during the second day of the trade fair.

Seminars and conferences

In three seminar squares, professionals can attend a total of more than 100 free seminars. Interested in floating solar projects? Want to know more about energy storage solutions in combination with solar plants? Or perhaps you want to know all about commissioning and maintaining PV systems according to IEC/EN 62446? Then the seminar area is where you need to be.

And for those who really want to go in-depth, there are morning-long thematic conferences. On Tuesday March 14th the theme will be large-scale solar projects. The next day the topic of choice is sustainable heating techniques. And on the final day, Thursday March 16th, a conference is aimed at facility managers, helping them with much needed information about saving energy through sustainable renovations.

The majority of these will be Dutch-spoken, but on Wednesday afternoon an extra conference will be held by EUPD Research, which will be entirely in English.

Under the leadership of the globally leading downstream research and consulting firm EUPD Research, this 2.5hrs in-depth and interactive conference session will bring participants up to speed on the latest dynamics driving growth in the booming Dutch market. Specifically tailored towards the needs of installers, developers, utilities, technology providers, policy makers, and key renewable energy stakeholders on both domestic and international level, delegates will gain a comprehensive understanding on what's happened, and what's about to happen in the Dutch PV Market. Featuring rarely seen charts of the trends that are driving the market.

Trade fair catalogue like no other

Solar Solutions International has close ties with the Dutch knowledge platforms Solar365 and Warmte365. This has resulted in a collaboration on the trade catalogue. Apart from essential information, like a floor plan and information about exhibitors and their products, the Solar Solutions International trade fair catalogue will also feature comprehensive articles written by the journalists of Solar365 and Warmte365.

Competition at high levels

With all the innovation and information, is there also room for some light hearted competition? Yes, with the European Solar Games. The top installers of the nation get up on the roof and do battle to see who installs a set of solar panels the best and fastest. Ready, set, go solar!

Digital and hassle free

Usually, trade fairs tend to have an element of chaos to them when it comes to the retention of information. Business cards are handed out, information is hastily scribbled on small pieces of paper, only to be lost and forgotten at the end of the fair. Solar Solutions has come up with a clever way to store all information in one central location: the YDEM app.

YDEM enables visitors to create and manage a personal database of all the information they have gathered at an event. It allows them to scan any product or person at an event and save the collected information in well-arranged lists within the app. Exhibitors can obtain an overview of their scanned leads and the visitors that have scanned their products. After the information has been scanned, results can be exported in excel lists instantly.

Green Heating Solutions

How better to use self-generated energy than for the sustainable heating of your home? Green Heating Solutions takes place simultaneously with Solar Solutions; the largest sustainable HVAC trade fair in the Benelux. A large section of the trade fair floor is dedicated to exhibitors showcasing sustainable solutions for heating, cooling,

ventilation and air conditioning. Visitors are treated to a treasure trove of information about the state of heat pumps, thermal energy storage, heat recovery systems, heat batteries and so much more at Green Heating Solutions.

Do you also want to discover new products or gain relevant knowledge at free seminars? Visit Solar Solutions International and Green Heating Solutions in Expo Greater

Amsterdam, Vijfhuizen from Tuesday 14th to Thursday 16th March. Order a free ticket, normally €75, by entering our invitation code 'PES2023' at en.solarsolutions.nl.

The Netherlands and beyond

Since 2022, Solar Solutions has been expanding to other countries. In November, the first edition of Solar Solutions Düsseldorf was held in North Rhine Westphalia and proved to be a tremendous success. The next German edition is set to

take place on 29th and 30th November 2023 in Messe Düsseldorf. Another country ready for its own edition of Solar Solutions is Belgium. On October 25th and 26th, Solar Solutions Kortrijk will welcome the Belgian solar industry to discover, learn and connect with the newest and the latest in the field. Both editions follow the example of Solar Solutions International, with a distinct focus on enabling trade and connecting professionals. With their own dedication seminar stages, the information shared by industry experts is of the highest level.
