

GCL SI changes the industry game with a totally transparent and controlled, decarbonised manufacturing

2nd February 2024, London, GCL System Integration Technology Co. Ltd (GCLSI), a one-stop energy solution provider for intelligent energy systems, participates as Platinum Sponsor in the 11th edition of the Solar Finance and Investment Europe Summit in London.

The event, which took place in London on 31st January and 1st February, gathered funds, banks, developers, utilities, governments, and industries across Europe and the UK to discuss how to reach Net Zero in Europe by 2025.

GCL SI, fully committed to attaining the renewable energy goals defined by the European Commission, the individual nations, and the UK Government, has a strong presence at the summit.

In its quest to net zero carbon emission, the company explains how its approach, methodology and technology have driven it to be the Global Leader in manufacturing decarbonisation.

Jimmy Richards, Senior Key Account Manager responsible for the growth of GCL SI in the UK, gave a meaningful and outstanding presentation for all attendees on day one. He illustrated the company's vertically integrated value chain manufacturing that goes from the silicon to the modules. This feature ensures complete control of the panel manufacturing, from the raw material to the end product.

Jimmy also presented GCL Fluidized Bed Reactor (FBR) technology for granular silicon. FBR saves 80% energy consumption compared to the Siemens rod-silicon methodology. GCL has an annual FBR production of 400.000 TM.

GCL SI Sustainability Head Mansha Marwah supported and expanded the company's clear commitment to Net-Zero by participating in the panel "ESG, Commerciality and Sustainability Regulation" on day one. Her consolidated expertise in sustainability and experience working with top European energy lobbying groups, solar associations, and key partner organisations make the panel a total learning experience.

Jimmy Richards, GCL SI utility market key leader at GCL SI played a vital role in the panel "The United Kingdom's Ambition for a 70GW Solar Market" on day one. His evaluation of the new implications and challenges that the UK solar market will encounter to meet the new governmental target to increase solar capacity by nearly fivefold by 2035 gave bread for thought to all attendees who left the panel with a clear perspective of the current and close and middle term energy framework in Great Britain.

Last but not least, Stavros Tsirigotakis, GCL SI, Key Account Manager for Greece, contributed to the success of the Day 2 panel "Insights into Greece's Solar Market and 2023 Solar & Storage Tender Allocations." Stavros stood out when he commented on the specifics of the regulatory environment, the upcoming announcement of the Greek Ministry of Energy, grid constraints as the main drivers behind the co-location of storage and PV.

Stavros communicated his views on the necessary solutions to overcome the existing and future challenges in the Greek market.

GCL SI made clear its commitment to fostering and developing renewable energy in Europe by using a deployment based on decarbonisation and sustainability.

Jimmy Richards, Senior Key Account Manager for the UK market, said: "GCL SI's approach towards renewable energy goes further than product supplying. We do not only aim to meet the client's demands with highly efficient panels, but we ensure that net zero is achieved from raw material to energy delivery".

About GCL

GCL System Integration Technology Co. Ltd (GCL SI) is part of the GOLDEN CONCORD Group (GCL), an international energy conglomerate specializing in clean and sustainable energy.

The Group, founded in 1990, now employs 40,000 people worldwide with business footprints across 31 provinces, municipalities and autonomous regions of mainland China, Hong Kong, Taiwan, as well as Africa, North America, Southeast Asia and Europe. GCL ranked second in the world's new energy Top500 2023.

GCL SI currently has operations all over the world and has 3 module production bases in mainland China, with the production capacity of 30GW, and an additional 10GW of high-efficiency cell capacity, making it a world-class one-stop renewable energy solution provider. GCL SI offers a wide range of high-quality products for a variety of application environments. All products underwent the most rigorous quality inspection and testing. With a vertically integrated value chain operation, GCL SI has proven track record of capability and expertise in delivering state-of-the-art solar package solutions incorporating DESIGN-PRODUCT-SERVICE.
